

ABSTRACT OF THE DISCLOSURE

A silver halide photographic lightsensitive material comprising a support having thereon at least one lightsensitive silver halide emulsion layer,  
5 wherein the lightsensitive material contains at least one compound represented by general formula (I) and at least one photographically useful group-releasing compound represented by general formula (II) or (III) that is capable of forming a compound having  
10 substantially no contribution to a dye after its coupling with an oxidized form of a developing agent:

15 The definitions of the substituents are set forth in the specification.
